

Instructions to replicate results in van den Berg, Bozio and Costa-Dias, “Policy Discontinuity and Duration Outcomes,” Quantitative Economics

Empirical results estimated on JUVOS data (Office for National Statistics). Access to the data can be gained from the UK Data Service. The set of “.do” files contain the code needed to construct the cleaned datasets used in estimation and the entire set of tables and figures presented the paper. These “.do” files are built to run on STATA. Executing the file “main.do” will call all other files and produce the estimates.
